

PRACTICE: PHOTOPHOSPHORYLATION

29. A mole of light is called a(n):

- a. Einstein
- b. Krebs
- c. Calvin
- d. Planck
- e. Lumpuy

30. A characteristic absorbance in the 400nm range displayed by molecules like cytochromes and photopigments is called:

- a. absorbance spectrum
- b. action spectrum
- c. Soret band
- d. blue light
- e. alpha band
