

TOPIC: HIGHER ORDER DERIVATIVES

Higher Order Derivatives

◆ Higher order derivatives are just _____ differentiation.

► For example, to find the *second* derivative of a function, take the derivative *twice*!

EXAMPLE

Find the fourth derivative of the function.

New

Higher Order Derivatives

$$f(x) = x^3 - x^2 + 5x - 7$$
$$f'(x) = 3x^2 - 2x + 5$$
$$f''(x) = \underline{\hspace{2cm}}$$

$\swarrow$ 1st derivative

____ derivative

____ derivative

____ derivative

◆ Notations for higher order (n^{th}) derivatives: $f^{(n)}(x)$, $D_x^n f(x)$, $\frac{d^n f}{dx^n}$, $\frac{d^n y}{dx^n}$

EXAMPLE

Find $f''(x)$.

$$f(x) = 4x^{-3} + 3x^7$$

TOPIC: HIGHER ORDER DERIVATIVES

EXAMPLE

For $f(x)$, find $f^{(5)}(x)$.

$$f(x) = x^8$$

PRACTICE

Find the third derivative of the given function.

(A)

$$f(x) = 24 + 4x^5$$

(B)

$$y = 3x^2 + 9x + 1$$

(C)

$$f(t) = 5t^{-4}$$
