

## CONCEPT: STANDARD REDUCTION POTENTIALS

● **Standard Reduction Potential** ( $E^\circ_{\text{red}}$ ) is a tendency of a species to gain \_\_\_\_\_ from another species.

□ Recall: Reduction is \_\_\_\_\_ of electrons, while oxidation is \_\_\_\_\_ of electrons.

□  $E^\circ_{\text{red}}$  values are measured at standard conditions: 25°C, 1 atm, \_\_\_\_\_ M solution and pH = \_\_\_\_\_.

- \_\_\_\_\_  $E^\circ_{\text{red}}$ , more likely \_\_\_\_\_ will occur.
